HG ontkalker

HG "ontkalker voor espresso- & padkoffiezetapparaten" op basis van melkzuur is speciaal ontwikkeld voor het verwijderen van versmeette, vercalculeerde soorten espresso- en koffiepaddmachines. HG "ontkalker" op basis van melkzuur is niet alleen milder en veiliger dan gewone citroenzuurontkalkers, het ontkalkt ook bestaande reuklozen en bovendien volledig biologisch afbreekbaar.

Bi regelmatig gebruik van deze HG "ontkalker" blijft de koffiemaken, en behoudt het apparaat in een optimale staat en heet u bovendien jaren langer plezier van uw espresso- of padkoffiezetapparaat!

Gebruiksaanwijzing: Giet 125 ml HG "ontkalker" in het waterreservoir en vul dit aan met water tot 750 ml (6x verdunt). Wanneer het waterreservoir kleiner is dan 750 ml, doseer dan 100 ml HG "ontkalker" in het waterreservoir en vul dit aan met water tot 600 ml (6x verdunt). Laat deze oplossing 10 minuten inwerken. Zet vervolgens het apparaat aan en laat de vloeistof voor de helft doorlopen. Doe het apparaat uit, laat het product 10 minuten inwerken en laat daarna de rest van de vloeistof doorlopen tot het residu geheel leeg is. Spol na de behandeling het waterreservoir goed om, vul het daarna met schoon leidingwater en laat vervolgens het apparaat minimaal 3 keer met alleen water werken zodat er geen kalkresten of nasmaak achterblijft. Plaats bij padkoffiezetapparaten eventueel eerst een padhouder met een gebruikte koffiepadd in de machine, zodat eventuele kalkresten hierin opgevangen worden. Op deze manier kan een mogelijke verstopping van de uitstroombuis worden voorkomen. Indien na toepassing niet alle kalkaanslag is verwijderd, de behandeling herhalen. Voor het ontkalken van normale koffiezetapparaten en wasmachines adviseren wij HG "snel ontkalker". Voor het reinigen en ontkalken van waterkokers adviseren wij HG "reinigig & ontkalker voor waterkokers". Voor het reinigen van het interne systeem en de leidingen van (volautomatische) koffiemachines adviseren wij HG "universele reinigingstabletten voor koffiemachines".

Verbruik: 125 of 100 ml per ontkalkingsbeurt afhankelijk van het volume van het waterreservoir van het espresso- of koffiepaddapparaat. 1 fles is voldoende voor 4 of 5 behandelingen.

Attentie: Fies rechtstreeks vervoeren en bewaren. Let op: eventuele dampen afkomstig uit het apparaat niet inademen! Vermijd langdurig contact met gereinigde staal en aluminium. Lees voor gebruik altijd eerst de gebruiksaanwijzing van uw apparaat. Niet gebruiken op zuurgevonde ondergrond en kalkhoudende ondergrond (zoals marmer, bijlisch, sardsteen, etc.). Gevegensblad medisch personeel is op te vragen via +31 (0)36 54 94 777 * Consumenten Informatieblad is te verkrijgen op www.HG.eu

Biodegradable according to regulation 648/2004/EC

HG détartrant

HG "détartrant pour machines espresso- & café crème" est un détartrant à base d'acide lactique, spécialement conçu pour le nettoyage des appareils à café de tous les types de machines à espresso/percolateur à dosettes. HG "détartrant" à base d'acide lactique est plus doux que les détartrants classiques à base d'acide citrique et est également plus efficace pour atteindre le haut de la machine. Il est indolore et assure 100% biodégradabilité. Utilisez régulièrement cet produit pour maintenir votre machine à café en parfait état et prolonger sa durée de vie. Utilisez-le régulièrement pour maintenir les performances de votre appareil et profiter de celui-ci de longues années!

Mode d'emploi: Versez 125 ml de HG "détartrant" dans le réservoir à eau et remplacez celui-ci de 750 ml d'eau (dilution avec un rapport de 1/6). Si le volume du réservoir à eau est inférieur à 750 ml, versez 100 ml de HG "détartrant" dans le réservoir à eau et remplacez celui-ci de 600 ml d'eau (dilution avec un rapport de 6/5). Laissez agir le produit pendant 10 minutes. Ensuite, mettez l'appareil en marche et laissez la mouture du liquide s'écouler. Éteignez l'appareil, laissez le produit agir 10 minutes, puis laissez le reste du liquide s'écouler jusqu'à ce que le réservoir soit complètement vide. Après le traitement, rincez bien le réservoir, re-remplissez-le d'eau du robinet, cliquez et faites-le tourner au moins avec uniquement de l'eau, pour qu'il ne reste aucun résidu calciné ni arbrégé. Dans le cas d'un percolateur à dosettes, placez éventuellement un support avec une dosette usagée dans la machine, de manière à ce que celui-ci recueille les éventuels résidus de calcare. Vous éteignez ainsi un éventuel bouchon au niveau de l'écoulement. S'il n'y a pas de bouchon, nettoyez le réservoir avec le traitement. Pour détartrer les percolateurs normaux et les lave-linge, nous vous conseillons d'utiliser HG "détartrant rapide". Pour nettoyer et détartrer les machines à café, nous vous recommandons HG "détartrant et détartrant pour bouillottes électriques". Pour nettoyer le système interne et les conduits de machines à café (entièrement) automatisées, nous conseillons HG "tablettes nettoyantes universelles pour machines à café".

Utilisation: 125 ou 100 ml par détartrage en fonction du volume du réservoir à eau de la machine à espresso ou du percolateur à dosettes. Un flacon suffit pour 4 ou 5 détartrages.

Attention: Transporter et conserver le flacon à la verticale. Veiller à ne pas respirer les éventuelles vapeurs qui se dégagent de l'appareil. Éviter tout contact prolongé avec l'acier inoxydable et l'aluminium, ainsi qu'avec les vêtements et les surfaces sensibles aux acides. Ne pas utiliser sur des surfaces sensibles aux acides ni calcaires, comme le marbre, la pierre de taille beige, etc. La fiche d'information destinée aux consommateurs médicaux peut être demandée au +31 (0)36 54 94 777 * La fiche d'information destinée aux consommateurs est disponible à l'adresse www.HG.eu

HG Entkalker

Der HG "Entkalker für Espresso- & Kaffee-Pad-Maschinen" ist ein Entkalker auf Basis von Milchsäure, speziell entwickelt zum Entfernen von verschmizten, verkalkten Arten von Kalkablagern aus unterschiedlichen Arten von Espresso- und Kaffee-Pad-Maschinen entwickelt wurde. Der HG "Entkalker" auf Basis von Milchsäure wirkt schonender als die gewöhnlichen Zitronensäure-Entkalker. Deshalb wirkt er noch sicherer, entkalkt aber trotzdem besser, ist geruchlos und außerdem vollständig biologisch abbaubar. Verwenden Sie dieses HG "Entkalker" regelmäßig, um die Leistungsfähigkeit und den Geschmacks des Kaffees zu erhalten, behält das Gerät seine Geschwindigkeit und haben Sie außerdem viele Jahre länger Freude an Ihrer Espresso- oder Kaffee-Pad-Maschine!

Gebruiksaanwijzing: Gießen Sie 125 ml HG "Entkalker" in den Wassertank und füllen Sie diesen bis auf 750 ml mit Wasser auf (6x verdünnt). Falls der Wassertank weniger als 750 ml fasst, gießen Sie 100 ml HG "Entkalker" in den Wassertank und füllen Sie diesen bis auf 600 ml mit Wasser auf (6x verdünnt). Lassen Sie diese Lösung 10 Minuten lang einwirken, schalten Sie anschließend das Gerät ein und lassen Sie die Flüssigkeit zur Hälfte durchlaufen. Schalten Sie danach das Gerät wieder aus, lassen Sie das Produkt 10 Minuten lang einwirken und lassen Sie dann die restliche Flüssigkeit durchlaufen. Spülen Sie das Gerät anschließend mit reinem Leitungswasser gründlich aus, danach mit sauberem Leitungswasser füllen und anschließend mindestens drei Mal nur mit Wasser durchlaufen lassen, damit alle Kalkreste entfernt werden. Um das Geschmacks zurückzubekommen. Setzen Sie bei einer Kaffee-Pad-Maschine eventuell erst einen Padhalter mit einem benutzten Kaffee-Pad in die Maschine, damit die Kalkreste im Padhalter aufgefangen. Auf diese Weise kann einer Verstopfung der Auslauföffnung vorgebeugt werden. Falls nach der Anwendung noch nicht alle Kalkablagern entfernt sind, wiederholen Sie die Behandlung. Zum Entkalken herkömmlicher Kaffeemaschinen und Waschmaschinen empfehlen wir HG "Schnell-Entkalker". Für die Reinigung und Entkalkung von Wasserkochern empfehlen wir HG "Reiniger und Entkalker für Wasserkocher". Für die Reinigung des internen Systems und der Leitungen (vollautomatischer) Kaffeemaschinen empfehlen wir HG "universele Reinigungstabletten für Kaffeemaschinen". **Verbrauch:** 125 oder 100 ml pro Entkalkungsbehandlung, abhängig vom Volumen des Wassertanks der Espresso- oder Kaffee-Pad-Maschine. 1 Flasche ist ausreichend für 4 oder 5 Behandlungen.

Achtung: Die Flasche aufrecht stehend transportieren und lagern. Eventuelle Dämpfe aus der Maschine nicht einatmen! Vermeiden Sie langfristigen Kontakt mit rostfreien Stahl und Aluminium vermeiden. Lesen Sie vor der Anwendung jederzeit erst die Gebrauchsanweisung Ihres Gerätes. Nicht für empfindliche und/oder kalkhaltige Flächen, wie zum Beispiel, beige Marmor, beige Kalkstein etc. geeignet. * Medizinisches Personal kann Produktanfragen unter der Rufnummer +31 (0)36 54 94 777 erfragen. * Das Informationsblatt für Konsumenten ist unter www.HG.eu erhältlich.
